

WEB DEVELOPMENT INTERN AT SHADOW FOX

Internship report submitted to

Guru Jambheshwar University of Science and Technology, Hisar

for the partial award of the degree

Of

Bachelor of Technology in Artificial Intelligence and Data Science

By

Kunal Kumar (240252850023)

Department of Artificial Intelligence and Data Science

**GURU JAMBHESHWAR UNIVERSITY OF SCIENCE AND
TECHNOLOGY, HISAR**

February, 2026

DECLARATION

I, Kunal Kumar, 240252850023, certify that the work contained in this internship report is original and has been carried out by me during my internship at Shadow Fox.

This report has not been submitted to any other institute or university for the award of any degree. I have adhered to the ethical standards and guidelines prescribed by the Department of Artificial Intelligence and Data Science while preparing this internship report.

Kunal Kumar

240252850023

Department of Artificial Intelligence and Data Science

Guru Jambheshwar University of Science and Technology, Hisar

INTERNSHIP CERTIFICATE

ACKNOWLEDGEMENT

I would like to express my sincere gratitude to **ShadowFox** for providing me with the opportunity to undertake a **one-month virtual internship in Web Development from 1st February 2026 to 28th February 2026**. This internship provided me with valuable exposure to practical web development and allowed me to apply my academic knowledge to real-world projects.

I am deeply thankful to **Mr. Aakash S, Program Coordinator at ShadowFox**, for his guidance, support, and coordination throughout the internship. The mentor sessions, project tasks, self-paced learning, and submission process helped me improve my technical understanding and professional skills. The internship program was structured across beginner, intermediate, and advanced project levels, providing a progressive learning experience.

I would also like to express my sincere gratitude to **Guru Jambheshwar University of Science and Technology, Hisar**, and the **Department of Artificial Intelligence and Data Science** for providing me with the academic support and opportunity to undertake this internship as part of my professional development.

I am grateful to everyone who directly or indirectly contributed to the successful completion of my internship. This experience has strengthened my skills in **web development, problem-solving, responsive design, user interface development, and project implementation**, while also improving my confidence in working on practical software projects.

Finally, I would like to thank **ShadowFox and everyone involved in the internship program** for providing me with an opportunity to learn, create, and gain practical industry exposure.

CHAPTER 1

COMPANY PROFILE

1.1 Company Overview

ShadowFox is an organization that provides students and aspiring professionals with opportunities to gain practical industry exposure through internships and project-based learning.

The internship program provides participants with an environment where they can apply their academic knowledge to practical software development tasks.

The Web Development Internship offered by ShadowFox focuses on developing practical skills through progressively structured projects. The internship provides exposure to areas such as website development, responsive design, user interface development, and improving existing web applications.

During my internship, I worked in the Web Development domain and completed the assigned project work during the one-month virtual internship period from 1 February 2026 to 28 February 2026. The successful completion of the internship is confirmed by the certificate issued by ShadowFox.

1.2 Company Mission and Vision

ShadowFox's internship model emphasizes practical learning and skill development by allowing students to work on projects rather than limiting their learning to theoretical concepts.

The internship structure encouraged me to understand the complete process of developing web-based applications, beginning with designing and developing a website and progressing toward improving the usability and functionality of an e-commerce application.

Through this approach, the internship helped bridge the gap between academic learning and practical implementation.

1.3 Company Services and Work Environment

ShadowFox provides internship-based learning opportunities in different technical domains. Its internship programs are designed to give students exposure to practical tasks, project development, mentorship, and professional workflows.

As a virtual intern, I worked in a remote environment and completed the assigned development activities using my own development environment and web technologies. The internship required independent implementation, problem-solving, testing, and submission of completed work.

The internship certificate confirms that I successfully completed a one-month virtual internship in Web Development at ShadowFox.

1.4 Relevance to Web Development

The internship was directly relevant to my academic and professional interest in software and web development. It provided an opportunity to apply concepts such as:

HTML and CSS-based website development

JavaScript-based interactivity

Responsive web design

User Interface (UI) development

User Experience (UX) improvement

E-commerce website development

Product filtering and sorting

Website testing and refinement

Project deployment and presentation

The practical nature of the internship allowed me to move beyond theoretical understanding and gain experience in building functional web applications.

1.5 Internship Overview

I joined ShadowFox as a Web Development Intern for a one-month virtual internship from 01/02/2026 to 28/02/2026. My internship certificate identifies Kunal Kumar as the intern and confirms successful completion of the program under the Web Development domain.

During the internship, I worked on practical web development projects, including the development of a personal portfolio website and an e-commerce website project, Velouré. These projects helped me strengthen my understanding of frontend development, website structure, responsive interfaces, UI/UX principles, and practical project implementation.

The internship was an important opportunity to develop technical skills while gaining experience in independently solving development problems and converting project requirements into working web applications.

CHAPTER 2

INTRODUCTION

2.1 Overview of the Internship

The internship at **ShadowFox** was undertaken as a **Web Development Intern** for a period of one month, from **1 February 2026 to 28 February 2026**. The internship was conducted virtually and focused on providing practical exposure to web development through project-based tasks. The official certificate confirms the successful completion of the internship in Web Development.

The internship provided an opportunity to apply concepts learned through academic coursework to practical website development. Instead of focusing only on theoretical concepts, the work involved designing, developing, improving, testing, and presenting functional web projects.

During the internship, I worked on two major projects: a **Personal Portfolio Website** and an **E-commerce Website Enhancement project named Velouré**. These projects provided practical experience in creating user-friendly interfaces, implementing responsive layouts, organizing website components, and improving the overall user experience.

The internship also helped me understand the importance of writing structured code, testing websites across different screen sizes, identifying usability issues, and continuously improving a project based on requirements.

2.2 Objectives of the Internship

The primary objectives of the ShadowFox Web Development Internship were:

- To gain practical experience in web development.
- To apply HTML, CSS, JavaScript, and other frontend technologies in real projects.
- To understand the process of developing a complete website from requirements to implementation.
- To develop a professional personal portfolio website.
- To improve the functionality and user experience of an e-commerce website.
- To understand responsive web design and mobile-friendly interfaces.
- To strengthen problem-solving and debugging abilities.
- To gain experience in project organization, testing, and deployment.
- To develop confidence in working independently on software projects.
- To bridge the gap between academic knowledge and practical industry requirements.

2.3 Roles and Responsibilities

As a **Web Development Intern**, my responsibilities primarily involved designing and developing functional web interfaces and implementing the requirements associated with the assigned projects.

My major responsibilities included:

1. **Personal Portfolio Development**

Designing and developing a personal portfolio website to present my introduction, skills, projects, resume, and contact information.

2. **Frontend Development**

Creating structured and visually appealing web pages using appropriate frontend technologies.

3. **Responsive Design**

Ensuring that the websites provide a usable experience across desktop, tablet, and mobile screen sizes.

4. **E-commerce Development**

Working on the **Velouré** e-commerce website and implementing features intended to improve the shopping experience.

5. **UI/UX Improvement**

Improving the visual structure, navigation, usability, and overall interaction of the website.

6. **Testing and Debugging**

Identifying interface and functionality issues and making necessary corrections during development.

7. **Project Deployment**

Deploying the completed projects online so that they could be accessed and demonstrated through live web links.

2.4 Tools and Technologies Used

The projects developed during the internship involved modern web development technologies and development tools.

Technology/Tool	Purpose
HTML	Structuring web pages and content
CSS	Styling and designing web interfaces
JavaScript	Adding interactivity and dynamic functionality
React.js	Developing reusable and component-based user interfaces
Vite	Frontend development and build tooling
Git/GitHub	Source-code management and project version control
Netlify	Deployment and hosting of web projects
Responsive Web Design	Making interfaces adaptable to different screen sizes

The completed projects were deployed online. The **Velouré e-commerce website** is available at veloure-stylekart.netlify.app, while the **personal portfolio website** is available at portfolio-kunalstack.netlify.app.

2.5 Projects Completed During the Internship

The practical work documented in this report focuses on the following projects:

2.5.1 Personal Portfolio Website

The personal portfolio website was developed to provide a professional online representation of my background, technical skills, projects, and other relevant information. The project involved designing a structured interface and implementing responsive sections suitable for presenting personal and professional information.

2.5.2 Velouré E-commerce Website

Velouré is an e-commerce website developed to provide an online shopping interface. The project focuses on presenting products through an organized interface and improving the overall user experience through features such as product presentation, navigation, filtering/sorting, and shopping-related interactions.

CHAPTER 3

DESCRIPTION OF WORK AND SKILLS LEARNED

3.1 Personal Portfolio Website

As part of the ShadowFox Web Development Internship, one of the major tasks was to develop a **personal portfolio website**. The purpose of the project was to create a professional online platform for presenting personal information, technical skills, projects, and contact details.

The project provided practical experience in planning a website structure, designing individual sections, implementing responsive layouts, and presenting information in a clear and visually appealing manner.

The completed portfolio is deployed online at **portfolio-kunalstack.netlify.app**.

3.1.1 Project Objective

The primary objectives of developing the personal portfolio website were:

- To create a professional online identity.
- To showcase technical skills and completed projects.
- To provide information about my educational and technical background.
- To create a responsive and user-friendly interface.
- To practice frontend web development concepts.
- To understand the process of developing and deploying a complete website.

3.1.2 Website Structure and Features

The portfolio website was organized into different sections to make the information easy to navigate and understand.

The major sections include:

- **Home:** Provides an introduction and first impression of the portfolio.
- **About:** Presents background and relevant personal information.
- **Skills:** Displays technical skills and technologies.
- **Projects:** Showcases projects developed during learning and practical work.
- **Resume:** Provides access to professional and educational information.
- **Contact:** Allows visitors to access contact-related information.

The interface was designed with a focus on clear navigation, readable content, consistent layout, and responsive presentation.

3.1.3 Technologies Used

The portfolio project involved the use of frontend web technologies including:

HTML – Used for structuring website content.

CSS – Used for styling, layouts, spacing, typography, and responsive design.

JavaScript – Used to implement interactive behavior.

React.js – Used for component-based interface development.

Vite – Used as the development and build environment.

Netlify – Used to deploy the website online.

3.1.4 Development Process

The development process consisted of several stages:

1. **Requirement Identification**

The required sections and information to be presented on the portfolio were identified.

2. **Interface Planning**

The layout and navigation structure of the website were planned before implementation.

3. **Component Development**

Individual sections and reusable interface components were developed.

4. **Styling and Responsiveness**

CSS and responsive design techniques were applied to make the website adaptable to different screen sizes.

5. **Content Integration**

Personal information, skills, projects, and other relevant content were integrated into the website.

6. **Testing and Debugging**

The website was tested to identify layout, navigation, and functionality issues.

7. **Deployment**

After completion, the portfolio was deployed using Netlify.

3.2 E-commerce Website – Velouré

The second major project was an **e-commerce website named Velouré**. The project focused on developing an online shopping interface with an emphasis on product presentation, navigation, usability, and user experience.

The project provided practical experience in developing a more complex website compared with a simple portfolio. It required organizing product information, designing product interfaces, and implementing shopping-oriented interactions.

The completed project is deployed at **veloure-stylekart.netlify.app**.

3.2.1 Project Objective

The main objectives of the Velouré project were:

- To develop a functional e-commerce website.
- To create an attractive and user-friendly shopping interface.
- To organize and display products effectively.
- To improve product discovery through filtering and sorting.
- To provide clear navigation between different parts of the website.
- To create a responsive interface suitable for different devices.
- To gain practical experience in developing a real-world web application.

3.2.2 Product Interface

The product interface was designed to present products in an organized manner. Product cards can be used to display relevant product information and provide users with an intuitive way to explore available products.

The interface focuses on:

- Product presentation
- Product categorization
- Product browsing
- Navigation
- Clear visual hierarchy
- User-friendly interaction

3.2.3 Product Filtering and Sorting

An important aspect of an e-commerce website is allowing users to find products efficiently.

Filtering and sorting functionality helps users narrow down available products according to relevant criteria and organize the displayed products according to their preferences.

This feature provided practical experience in handling user-selected options and dynamically updating the displayed product information.

3.2.4 UI/UX Improvements

The project also involved focusing on the **User Interface (UI)** and **User Experience (UX)** of the e-commerce website.

The major areas considered were:

- Simple and understandable navigation.
- Organized product presentation.
- Consistent spacing and typography.
- Clear buttons and interactive elements.
- Responsive layouts.
- Improved product discovery.
- Better overall shopping experience.

The objective was not simply to make the website visually attractive, but to make it easier for users to understand and interact with the application.

3.2.5 Technologies Used

The major technologies and tools used for the Velouré project included:

Technology	Application
React.js	Component-based frontend development
JavaScript	Dynamic functionality and interactions
HTML/JSX	Structuring interface components
CSS	Styling and responsive layouts
Vite	Development and build environment
Netlify	Website deployment

3.3 Challenges and Solutions

During the development of both projects, several practical challenges were encountered. These challenges helped improve problem-solving and debugging skills.

Challenge 1: Responsive Design

Websites need to work properly on different screen sizes. Maintaining consistent layouts between desktop and mobile views required careful handling of dimensions, spacing, and component layouts.

Solution: Responsive design techniques and flexible layouts were used to adapt the interface to different screen sizes.

Challenge 2: Component Organization

As the number of website sections increased, maintaining a clean project structure became important.

Solution: The interface was divided into reusable components, making the project easier to maintain and modify.

Challenge 3: Product Display

An e-commerce application requires products to be displayed consistently and efficiently.

Solution: Reusable product components were used to maintain a consistent structure while displaying different product information.

Challenge 4: User Experience

A website may technically work but still be difficult to use if navigation and interface elements are poorly organized.

Solution: The layout and navigation were refined to make important information and actions easier for users to locate.

Challenge 5: Deployment

Moving a locally developed website to a publicly accessible environment requires proper build and deployment configuration.

Solution: The projects were built and deployed through Netlify, allowing the completed applications to be accessed online.

3.4 Technical Skills Acquired

The internship helped strengthen several technical skills:

- **Frontend Development:** Improved understanding of developing complete web interfaces.
- **React.js:** Gained practical experience with component-based development.
- **JavaScript:** Improved understanding of interactive and dynamic web functionality.
- **HTML/CSS:** Strengthened knowledge of website structure and styling.

- **Responsive Design:** Learned to design interfaces that adapt to different screen sizes.
- **UI/UX:** Developed a better understanding of usability and interface organization.
- **E-commerce Development:** Gained practical exposure to product-based web applications.
- **Git/GitHub:** Improved familiarity with managing development projects and source code.
- **Deployment:** Gained experience deploying websites using Netlify.
- **Debugging:** Improved the ability to identify and resolve implementation problems.

3.5 Overall Learning Outcome

The ShadowFox internship provided practical exposure to the complete process of developing web projects. Working on both a **personal portfolio website** and the **Velouré e-commerce website** allowed me to work with projects of different complexity levels.

The portfolio project strengthened my understanding of personal branding, responsive design, and structured frontend development. The e-commerce project provided additional experience in product presentation, user interaction, filtering, sorting, and UI/UX considerations.

Overall, the internship helped me connect theoretical knowledge with practical implementation and improved my ability to plan, develop, test, debug, and deploy web applications. It also strengthened my confidence in working independently on real-world web development projects.

CHAPTER 4

PROJECT IMPLEMENTATION WORK

During the ShadowFox Web Development Internship, I implemented two major web development projects: a **Personal Portfolio Website** and the **Velouré E-commerce Website**. The projects provided practical experience in frontend development, component-based design, responsive interfaces, user interaction, deployment, and project testing.

4.1 Personal Portfolio Website Implementation

4.1.1 Objective

The objective of the personal portfolio project was to develop a professional and responsive website that presents my technical skills, projects, background, and contact information in an organized manner.

The website was designed to serve as an online professional profile that can be shared with recruiters, mentors, and other visitors.

Live Project: portfolio-kunalstack.netlify.app

4.1.2 Development Workflow

The implementation followed the following workflow:

Requirement Analysis → Interface Planning → Component Development → Styling → Responsive Design → Testing → Deployment

Step 1 – Requirement Analysis

The required portfolio sections and information were identified, including personal introduction, skills, projects, resume, and contact information.

Step 2 – Interface Planning

The overall page structure and navigation were planned to ensure that visitors could easily move between different sections.

Step 3 – Component Development

The website interface was divided into reusable components. This approach helped keep the code organized and made individual sections easier to modify.

Step 4 – Styling

CSS was used to define the visual appearance, layout, spacing, typography, and other interface properties.

Step 5 – Responsive Design

The interface was adjusted to work across different screen sizes, including desktop and mobile devices.

Step 6 – Testing

The website was tested for navigation, layout consistency, responsiveness, and basic functionality.

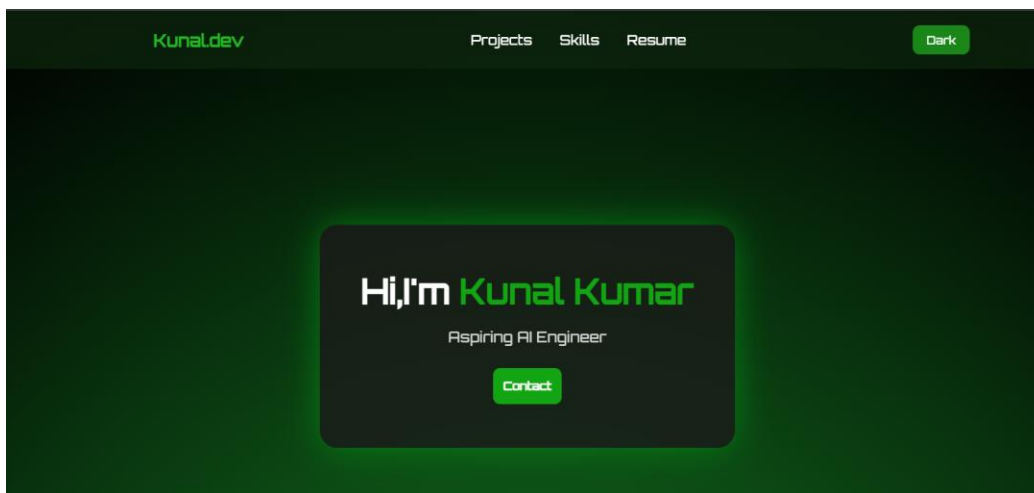

Step 7 – Deployment

After development and testing, the website was deployed using Netlify and made publicly accessible.

4.1.3 Implementation Result

The completed portfolio provides a centralized platform for presenting my professional information and development projects. It demonstrates practical implementation of frontend development and responsive web design concepts.

Figure 4.1.1: Personal Portfolio Website – Home Page

4.2 E-commerce Website – Velouré Implementation

4.2.1 Objective

The objective of the Velouré project was to develop an e-commerce website that provides users with an organized and visually appealing interface for browsing products.

The project focused on product presentation, navigation, filtering and sorting, user interaction, responsive design, and overall shopping experience.

Live Project: veloure-stylekart.netlify.app

4.2.2 Development Workflow

The implementation followed the workflow:

Requirement Analysis → UI Planning → Product Component Development → Product Data Integration → Filtering & Sorting → Responsive Design → Testing → Deployment

4.2.3 User Interface Development

The website interface was designed around the requirements of an online shopping platform. Product information was presented using structured product components, allowing multiple products to be displayed consistently.

Reusable components helped maintain consistency throughout the application and simplified modifications during development.

4.2.4 Product Filtering and Sorting

Filtering and sorting functionality was implemented to improve product discovery.

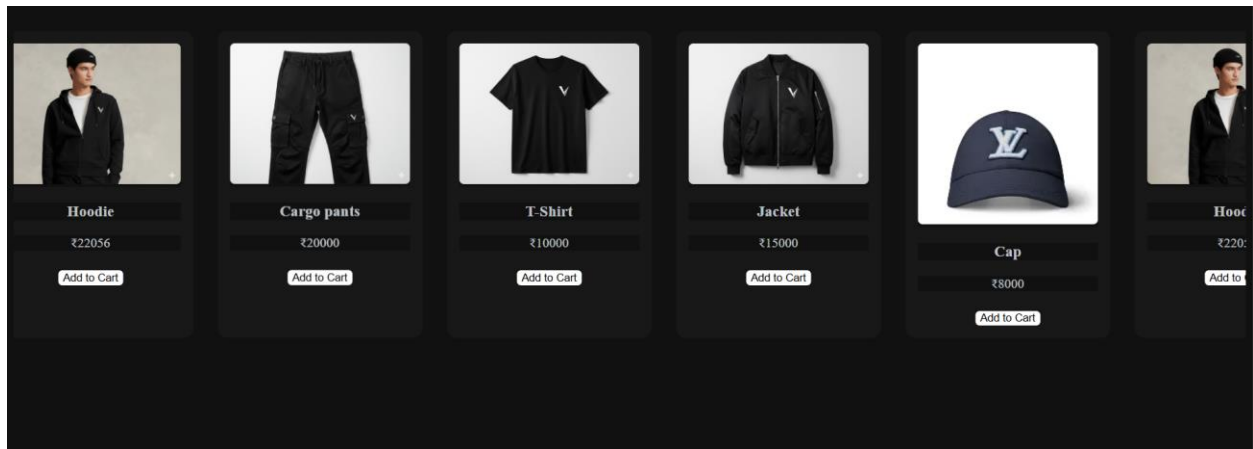

Users can interact with the available product controls to narrow down or organize products according to the available criteria. This reduces the effort required to find relevant products and improves the overall browsing experience.

4.2.5 Product Display

Products were displayed through structured product cards containing relevant information and interaction elements.

The product-based component structure allows the interface to maintain a consistent appearance while displaying different products.

Figure 4.2.3: Velouré – Product Listing

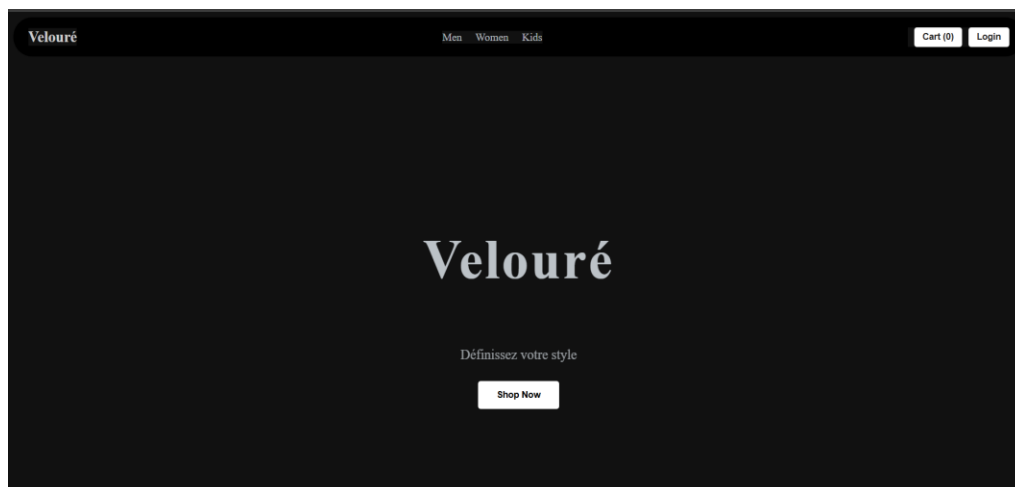

4.2.6 Responsive Implementation

Responsive design techniques were applied to ensure that the e-commerce interface could adapt to different screen sizes.

The layout, product cards, navigation elements, and other interface components were adjusted to provide a usable experience on both desktop and smaller screens.

Figure 4.2.4: Velouré – Responsive Interface

4.3 Technologies and Development Tools

The major technologies used during project implementation were:

Technology	Role in Implementation
HTML/JSEX	Structuring web interfaces
CSS	Styling and responsive layouts
JavaScript	Implementing interactive functionality
React.js	Developing reusable UI components
Vite	Development and project build environment
Git/GitHub	Source-code management
Netlify	Deployment and hosting

4.4 Testing and Results

Testing was performed after implementation to identify problems related to the interface, responsiveness, navigation, and functionality.

Test Area	Expected Result	Result
Navigation	Users should be able to navigate between sections	Successful
Responsive Layout	Interface should adapt to different screen sizes	Successful
Portfolio Sections	Required information should be displayed correctly	Successful
Product Display	Products should appear consistently	Successful
Filtering/Sorting	Product results should update according to selected options	Successful
UI Elements	Buttons and interactive elements should function correctly	Successful
Deployment	Websites should be accessible through live URLs	Successful

4.4.1 Final Outcome

The implementation of both projects provided practical experience in developing and deploying modern web applications.

The **Personal Portfolio Website** successfully established an online platform for presenting professional information and projects, while **Velouré** provided practical experience in developing an e-commerce-oriented interface with product browsing and user-experience considerations.

The projects also strengthened my ability to move through the complete development cycle—from **planning and implementation to testing and deployment**.

CHAPTER 5

LEARNING OUTCOMES

The ShadowFox Web Development Internship provided valuable practical exposure to web development and helped me connect theoretical concepts with real-world project implementation. During the one-month internship from **1 February 2026 to 28 February 2026**, I worked on practical web projects that strengthened my technical, analytical, and professional abilities. The internship certificate confirms my successful completion of the Web Development internship at ShadowFox.

5.1 Technical Learning Outcomes

During the internship, I developed and strengthened the following technical skills:

- Gained practical experience in **frontend web development**.
- Strengthened my understanding of **HTML, CSS, and JavaScript**.
- Developed practical experience with **React.js** and component-based user interface development.
- Learned to create **reusable and structured components** for web applications.
- Improved my understanding of **responsive web design**.
- Learned to design layouts that work across different screen sizes.
- Gained experience in implementing **interactive website elements**.
- Developed an understanding of **e-commerce website development**.
- Practiced implementing product presentation, filtering, and sorting functionality.
- Gained experience in testing and debugging web applications.
- Learned the process of **deploying websites using Netlify**.

5.2 Web Development Skills:

The development of the Personal Portfolio Website and Velouré E-commerce Website helped me improve my practical web development abilities.

The **Personal Portfolio Website** helped me understand how to structure and develop a professional website containing personal information, technical skills, projects, resume information, and contact details.

The **Velouré E-commerce Website** provided experience with a more complex web application involving product presentation, navigation, filtering, sorting, and user-experience considerations.

Through these projects, I learned that successful web development requires more than writing code. The developer must also consider **design, usability, responsiveness, maintainability, testing, and deployment**.

5.3 Professional Learning Outcomes:

The internship also contributed to the development of professional skills, including:

- Improved ability to understand and implement project requirements.
- Developed greater confidence in working independently.
- Improved time management while completing project tasks.
- Strengthened communication and documentation skills.
- Learned to approach development problems systematically.
- Improved attention to detail while designing and testing interfaces.
- Gained experience in presenting completed projects through deployed websites.
- Developed a better understanding of the workflow involved in practical software development.

5.4 Problem-Solving and Practical Experience:

One of the most important outcomes of the internship was the improvement of my **problem-solving ability**.

While developing the projects, I encountered challenges related to responsive layouts, component organization, user interface design, product presentation, and deployment. Resolving these issues required analyzing the problem, identifying possible causes, testing solutions, and making improvements.

This practical experience helped me understand the difference between simply learning a technology and actually **using that technology to solve a development problem**.

5.5 Industry Understanding:

The internship provided an understanding of how web development skills are applied to practical projects.

I gained exposure to the complete development cycle:

Requirement Understanding → Planning → Development → Testing → Debugging → Deployment

Working on actual projects also helped me understand the importance of writing organized code, maintaining a consistent user interface, testing different screen sizes, and considering the user's experience while developing a website.

5.6 Personal Development:

The internship contributed to my personal development by improving my confidence and ability to work on technical projects independently.

I became more comfortable with experimenting with different approaches, identifying errors, researching solutions, and refining my implementations. Working on projects from the initial idea through final deployment also improved my sense of responsibility toward completing a technical task.

5.7 Overall Learning Outcome:

Overall, the ShadowFox Web Development Internship was a valuable practical learning experience. The development of the **Personal Portfolio Website** and **Velouré E-commerce Website** allowed me to apply web development concepts in practical projects and gain experience beyond classroom-based learning.

The internship strengthened my foundation in **frontend development, React.js, responsive design, UI/UX, e-commerce development, debugging, testing, and deployment**. It also improved my problem-solving, independent learning, and project development skills.

The experience has provided a stronger foundation for pursuing more advanced areas of software and web development and for developing larger, production-oriented applications in the future.
